

Venezia Touch Cleaning Manual

It is recommended that the brewer and milk systems are cleaned daily to obtain high quality and healthy drinks.

Daily clean of the brewer and mixer system

You need for this cleaning :

- Small brush and brush set
- Jugs that can withstand hot water
- Cleaning tablets (Yellow and Red/White tabs)
- Cleaning cloth

1

Open the door, empty the dreg bin and put it back. Turn off the machine and remove the top cover for better access.

Pull the coffee scraper arm aside. Clean the area with the brush, wipe off the underside of the stamp with a dry cloth. Clean the outside of the machine, dip tray and the bean hopper for coffee oils with a damp cloth.

2

3

Remove the two lids on the mixer houses, disassemble the houses by turning slight clockwise while pushing in. Clean the houses, lids and outlet nozzles (use small brush set) with warm soap water and dry. Assemble the clean mixer houses, lids and nozzles to the outlet again.

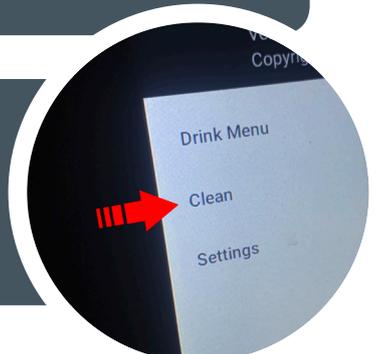

Close the door, turn the machine back on. Place an empty jug under the outlet. Open the door again and place a cleaning tablet (Yellow) inside the scraper arm. Close the door.

4

5

Start the automatic cleaning from the menu on the screen. Brew a coffee drink to test the machine and throw it away.

Venezia Touch Cleaning Manual

It is recommended that the brewer and milk systems are cleaned daily to obtain high quality and healthy drinks.

Daily clean of fresh milk system

You need for this cleaning :

- 2-3 jugs that can withstand hot water
- Cleaning tablets (Red/White Tabs)
- Cleaning cloth

1

Fill a jug with cold water and one with 600 ml warm water (from the machine). Dissolve a milk cleaning tablet (switch between red/white daily) in the warm water. Place an empty jug under the outlet on the machine.

Wipe off and place the milk hose/spear from the fridge in the cold water. Choose the milk drink from the menu to rinse the milk hose until clear water comes out.

2

3

Switch the hose/spear to the warm water with the dissolved cleaning tab. Run all the cleaning liquid through the system. Change back to the jug with cold water and run a few drinks with clean water through the system.

Put back the milk with hose/spear in the fridge, run a milk drink to test and throw away.
